Media Types

Last Updated

2018-05-15

Registration Procedure(s)

Expert Review for Vendor and Personal Trees.

Ned Freed (primary), Murray Kucherawy (secondary)

Reference

[RFC6838][RFC4855]

Note

Per Section 3.1 of [RFC6838], Standards Tree requests made through IETF documents will be reviewed and approved by the IESG, while requests made by other recognized standards organizations will be reviewed by the Designated Expert in accordance with the Specification Required policy. IANA will verify that this organization is recognized as a standards organization by the IESG.

 $[\underline{\text{RFC2946}}]$ specifies that Media Types (formerly known as MIME types) and Media Subtypes will be assigned and listed by the IANA.

Procedures for registering Media Types can be found in [RFC6838], [RFC4289], and [RFC6657]. Additional procedures for registering media types for transfer via Real-time Transport Protocol (RTP) can be found in [RFC4855].

The following is the list of Directories of Content Types and Subtypes. If you wish to register a Media Type with the IANA, please see the following for the online application:

[Application for registration of Media Types]

Other Media Type Parameters: [IANA registry media-types-parameters]
Media Type Sub-Parameters: [IANA registry media-type-sub-parameters]

Available Formats

Registries included below

- application
- audio
- font <u>example</u>
- <u>image</u>
- message
- model multipart
- video

example

Note

The 'example' media type is used for examples. Any subtype following the media type syntax may be used in those examples. No subtype can be registered with IANA. For more information $see[\frac{RFC4735}{2}]$.

Note: The occurrence of an 'example' media type as a media type outside of examples, e.g. in a Content-Type header, is an error and should be reported to the implementor.[RFC2045][RFC2046] specifies that Content Types, Content Subtypes, Character Sets, Access Types, and conversion values for MIME mail will be assigned and listed by the IANA.

Note

Other MIME Media Type Parameters: [$\underline{IANA\ registry\ \textit{media-types-parameters}}]$

No registrations at this time.
